Debugging A Stack Overflow

Uh oh! We've written a recursive function, but it's throwing an error! Investigate the included problem and see if you can figure out what's going on.

Once you think you've fixed the issue, use `mocha` to confirm. Make sure you're in the project's root: you should be in the same place as the `problems/` and `test/` directories. Once there, run the following command:

```
> mocha
```

If you get stuck, step back and try breaking the problem down. Are we missing any key steps for a recursive function?

When the tests pass and the error is gone, take a minute to celebrate - you're officially a recursion debugger!
